California Cryobank is a reproductive tissue bank founded in 1977 to provide physicians and patients with a comprehensive resource for fertility preservation and specialized services. For 40 years, we have helped thousands of individuals to preserve their fertility.

California Cryobank has grown into one of the largest reproductive laboratories of its kind with an unparalleled focus on quality and service. We are accredited by the AATB (American Association of Tissue Banking), certified by CLIA (Clinical Laboratory Improvement Amendment), licensed by the California and New York health departments, and are registered with the FDA (see cryobank.com for details.)

Thank you for choosing us to accompany you on your journey! We understand how exciting and unnerving transitioning can be and we want to make this part of the process as easy as possible. The decision to preserve your fertility can feel overwhelming, but we’re here to provide education, support, and guidance in a safe and welcoming environment where you are free to be your authentic self.

For 40 years, we’ve helped thousands of clients overcome obstacles to become parents. We welcome everyone regardless of gender identity, gender presentation, and sexual orientation.

While some of our clients are ready to start a family right away, we also work with teens that may store their reproductive tissue for decades. Successful pregnancies have been reported from specimens frozen up to 28 years!

If you’ve always dreamed of having biological children, we’d like to help you make that dream come true!
WHEN SHOULD I START FERTILITY PRESERVATION?

We recommend that you discuss fertility preservation options with your physician before you begin hormone replacement therapy (HRT).

If you already started HRT, it is still possible to freeze and bank specimens for storage, however it will require taking a break from HRT treatment.

TRANSITIONING FTM?

You will need to work with a fertility clinic to do an egg retrieval. If you need donor sperm to create embryos, we offer a diverse selection of over 500 extensively screened sperm donors. After your eggs or embryos are frozen, you can transfer them to one of our locations for long-term storage.

Please contact us to set up a storage account.

TRANSITIONING MTF?

We can assist you with the freezing and storing of sperm tissue. If you need an egg donor to create embryos, we offer a diverse selection of over 300 extensively screened egg donors.

Get started with these three easy steps:
